Education

University of Portland Portland, OR

Bachelor of Science in Computer Science | GPA: 3.7 *Expected May 2027*

- Relevant Courses: Artificial Intelligence, Data Structures, Algorithms, Database Management, Operating Systems, Compiler Design, Software Engineering, Object-Oriented Programming, Computer Architecture

Experience

Software Engineer Intern Jun 2026 – Present

Framatome *Lynchburg, VA*

- Flagged page-number errors in engineering documents before submission with **95%** accuracy, including scanned and rotated pages, by leading development of a Docling-based Python precheck with a RapidOCR fallback
- Detected unmarked blank pages with **99%** accuracy by validating content and required notation using OCR signals
- Reduced deployment setup time by **55%** via automated Docker releases to UAT and production using Azure DevOps
- Cut time to locate active checks by **60%** through a review UI that surfaces them first using Vue.js/TypeScript
- Protected check accuracy across releases by building a **300**-document JSON regression suite with pytest
- Resolved UAT edge cases in page-number and blank-page checks by working with engineers and document reviewers
- Eliminated redirect errors for signed-in users by fixing authentication defects in a C# document-upload API

Undergraduate Machine Learning Researcher Sep 2026 – Present

University of Portland *Portland, OR*

- Achieved 85% accuracy on unseen recording sessions detecting whether a driver is focusing on sound or sight to steer the team's brain-controlled RC car by training a Keras CNN on 8-channel EEG signals
- Exposed data leakage behind a reported 98.5% accuracy by re-scoring the model on held-out recording sessions
- Fixed an input-scaling bug that dropped a held-out sitting to chance by comparing per-electrode and shared scaling
- Reduced steering jitter by 64% on unseen sessions using a real-time averaging predictor in Python with 58 unit tests

Software Engineer Intern May 2025 – Aug 2025

ResVR *Canada (Remote)*

- Decreased AI avatar render time by **62%** through shorter Gemma 3 scripts and lower popup video resolution
- Automated script-to-video conversion by connecting a dual-model backend pipeline to the frontend
- Increased video completion rate to **95%** through HeyGen rate-limit handling, request throttling, and retries
- Masked user-perceived render latency by looping an idle avatar during async HeyGen video generation

Undergraduate Machine Learning Researcher Jan 2024 – May 2025

University of Portland *Portland, OR*

- Optimized AI agent fitness scores by **30%** using a genetic algorithm that evolves perceptron-based decision models in C#/.NET to replicate behavioral patterns of living organisms
- Expanded agent testing to 4 new terrains using recursive diamond-square and polar-coordinate generators
- Raised reward discovery by **12%** through a fitness redesign using sliding-window momentum and proximity bonuses
- Trimmed analysis time by **40%** with a live Python dashboard classifying agents as climbers, descenders, or collectors

Projects

NBA Game Predictor | *Python, FastAPI, React, Docker*

- Achieved **66.6%** accuracy (0.72 AUC) on held-out games using logistic regression with Elo and net-rating features
- Prevented training-data leakage across **1,000+** games with a time-ordered Python pipeline and 14 automated tests
- Served live predictions through a Dockerized FastAPI backend on Render and a React frontend on Vercel

DinnaSwipe | *React Native, TypeScript, PostgreSQL, Supabase*

- Synced swipe votes across group members' phones by adding a polling fallback to Supabase realtime updates
- Enabled nationwide restaurant search by mapping **130** OpenStreetMap cuisine tags into 8 Overpass API filters

Technical Skills

Languages: Python, C#, Java, C, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & Libraries: .NET, Vue.js, React, React Native, Flask, FastAPI, Node.js, Express, Next.js, LangChain
Developer Tools: Git, Linux, Azure DevOps, GitHub Actions, Docker, Redis, pytest, Render, Vercel
ML & Data: scikit-learn, PyTorch, TensorFlow, Keras, NumPy, XGBoost, Matplotlib, Docling, RapidOCR
