Education

University of Portland — Portland, OR
Bachelor of Science in Computer Science | GPA: 3.7 — *Expected May 2027*

Experience

Software Engineer Intern | Project Poster — Jun 2026 – Present
Framatome — *Lynchburg, VA*

- Flagged compliance errors in engineering documents, such as page numbering, with **95%+** accuracy across all checks, including scanned and rotated pages, by designing and building a **Docling**-based **Python** precheck with **RapidOCR**
- Measured check accuracy by building a 300-document JSON regression suite, with 86% **pytest** coverage on check logic
- Reduced deployment setup time by 55% via automated **Docker** releases to UAT and production in **Azure DevOps**
- Cut time to locate active checks by 60% through a review UI that surfaces them first using **Vue/TypeScript**
- Resolved UAT edge cases in page-number and blank-page checks by working directly with customers and engineers
- Eliminated redirect errors for signed-in users by fixing authentication defects in a **C#/.NET** document-upload API

Undergraduate Machine Learning Researcher | Research Poster — Sep 2026 – Present
University of Portland — *Portland, OR*

- Achieved **85%** accuracy on unseen recording sessions detecting whether a driver is focusing on sound or sight to steer the team's brain-controlled RC car by training a **Keras CNN** on 8-channel OpenBCI EEG signals
- Exposed data leakage behind a reported 98.5% accuracy by re-scoring it with leave-one-sitting-out cross-validation
- Fixed an input-scaling bug that dropped a held-out sitting to chance by comparing per-electrode and shared scaling
- Lowered steering jitter 64% on unseen sessions via a real-time averaging **Python** predictor at 100% **pytest** coverage

Software Engineer Intern — May 2025 – Aug 2025
ResVR — *Canada (Remote)*

- Automated script-to-video conversion by building an end-to-end dual-model **Gemma 3** pipeline in **FastAPI**
- Decreased AI avatar render time by 62% through shorter Gemma 3 scripts and lower popup video resolution
- Increased video completion rate to 95% through **HeyGen** rate-limit handling, throttling, and retries in **Python**

Undergraduate Machine Learning Researcher | Research Poster — Jan 2024 – May 2025
University of Portland — *Portland, OR*

- Raised AI agent fitness scores 30% by extending a team genetic algorithm that evolves perceptron-based decision models in **C#/.NET** to replicate behavioral patterns of living organisms
- Trimmed analysis time by 40% with a live **Python** dashboard classifying agents as climbers, descenders, or collectors

Projects

NBA Game Predictor | *Python, FastAPI, React, Docker* — Live Demo | GitHub

- Achieved 66.6% accuracy (0.72 AUC) on held-out games using **logistic regression** with Elo and net-rating features
- Prevented training-data leakage across 1,000+ games with a time-ordered **Python** pipeline at 97%+ **pytest** coverage
- Served live predictions through a Dockerized **FastAPI** backend on Render and a **React** frontend on Vercel

DinnaSwipe | *React Native, TypeScript, PostgreSQL, Supabase* — GitHub

- Enabled nationwide restaurant search by mapping 130 OpenStreetMap cuisine tags into 8 **Overpass API** filters
- Synced swipe votes across group members' phones by adding a polling fallback to **Supabase** realtime updates

Nursing Diagnostic Trainer | *Node.js, Express, LangChain, Jest*

- Built the chat interface for a patient-simulation chatbot that helps nursing students practice diagnosis
- Achieved 90% code coverage with **Jest** and Supertest suites for the UI and API, tracked in **GitHub Actions** CI

Technical Skills

Languages: Python, C#, Java, C, JavaScript, TypeScript, SQL/PostgreSQL, HTML/CSS
Frameworks & Libraries: .NET, Vue.js, React, React Native, Flask, FastAPI, Node.js, Express, Next.js, LangChain
Developer Tools: Git, Linux, Azure DevOps, GitHub Actions, Docker, Supabase, Redis, pytest, Render, Vercel
ML & Data: scikit-learn, PyTorch, TensorFlow, Keras, NumPy, XGBoost, Matplotlib, Docling, RapidOCR
