Education

University of Portland — Portland, OR

Bachelor of Science in Computer Science | GPA: 3.7 — *Expected May 2027*

- Relevant Courses: Artificial Intelligence, Data Structures, Algorithms, Database Management, Operating Systems, Compiler Design, Software Engineering, Object-Oriented Programming, Computer Architecture

Experience

Software Engineer Intern — Jun 2026 – Present

Framatome — *Lynchburg, VA*

- Flagged page-number errors in engineering documents before submission with **95%** accuracy by leading development of a Python precheck that validates PDFs against compliance standards using Docling
- Recovered page numbers from scanned and misoriented documents by building a rotation-aware OCR fallback using RapidOCR when sparse Docling output could not be validated reliably
- Detected unmarked blank pages with **99%** accuracy by validating content and required notation using OCR signals
- Validated AI check output before deployment with a **300**-document JSON regression suite and pytest unit tests
- Reduced setup time by **55%** through automated Docker deployments to UAT and production using Azure DevOps
- Resolved UAT edge cases in page numbering and blank-page handling by partnering with stakeholders for feedback
- Cut time to locate active checks by **60%** through a review UI that surfaces them first using Vue.js/TypeScript
- Eliminated redirect errors for signed-in users by fixing authentication defects in a C# document-upload API

Undergraduate Machine Learning Researcher — Sep 2026 – Present

University of Portland — *Portland, OR*

- Achieved **94%** accuracy on 2 held-out subjects classifying audio vs. visual attention for the team's brain-controlled RC car by training a Conv1D network on 8-channel EEG data using Keras
- Exposed random-split leakage inflating accuracy from **73%** to **100%** with leave-one-sitting-out validation in NumPy
- Improved cross-session accuracy from **81%** to **85%** by fixing a feature-scaling flaw found through ablation studies
- Lowered replayed steering flicker by **52%** with a real-time averaging predictor in Python, backed by **57** unit tests

Software Engineer Intern — May 2025 – Aug 2025

ResVR — *Canada (Remote)*

- Decreased render time for AI avatar video replies by **62%**, integrating the HeyGen API with Python and Gemma 3
- Automated script-to-video conversion by connecting a dual-model backend pipeline to the frontend
- Increased video completion rate to **95%** through HeyGen rate-limit handling, request throttling, and retries
- Masked user-perceived render latency by looping an idle avatar during async HeyGen video generation

Undergraduate Machine Learning Researcher — Jan 2024 – May 2025

University of Portland — *Portland, OR*

- Optimized AI agent fitness scores by **30%** using a genetic algorithm that evolves perceptron-based decision models in C#/.NET to replicate behavioral patterns of living organisms
- Expanded agent testing to 4 new terrains using recursive diamond-square and polar-coordinate generators
- Raised reward discovery by **12%** through a fitness redesign using sliding-window momentum and proximity bonuses
- Trimmed analysis time by **40%** with a live Python dashboard classifying agents as climbers, descenders, or collectors

Projects

DinnaSwipe | *React Native, TypeScript, PostgreSQL, Supabase*

- Synced swipe votes across group members' phones by adding a polling fallback to Supabase realtime updates
- Enabled nationwide restaurant search by mapping **130** OpenStreetMap cuisine tags into 8 Overpass API filters

Technical Skills

Languages: Python, C#, Java, C, JavaScript, TypeScript, SQL, HTML/CSS
Frameworks & Libraries: .NET, Vue.js, React, React Native, Flask, FastAPI, Node.js, Express, Next.js, LangChain
Developer Tools: Git, Linux, Azure DevOps, GitHub Actions, Docker, Redis, pytest, Render, Vercel
ML & Data: scikit-learn, PyTorch, TensorFlow, Keras, NumPy, XGBoost, Matplotlib, Docling, RapidOCR
