## EDUCATION

### University of Portland

Portland, OR

*Bachelor of Science in Computer Science — GPA: 3.78*

*Expected May 2027*

- Relevant Courses: Artificial Intelligence, Theory of Computation, Data Structures, Software Engineering, Programming Languages, Discrete Structures, Computer Architecture, Object-Oriented Programming

## TECHNICAL SKILLS

**Languages:** Python, Java, C, C#, JavaScript, TypeScript, HTML/CSS, SQL

**Frameworks & Libraries:** React, Node.js, Next.js, Flask, Pandas, PyTorch, TensorFlow, scikit-learn, XGBoost

**Developer Tools:** Git, Linux, GitHub Actions, Supabase, Docker, Render, Vercel, CI/CD

## EXPERIENCE

### Software Engineer Intern

May 2025 – Aug 2025

*ResVR*

*Canada (Remote)*

- Improved 3D avatar rendering system by 62% by integrating HeyGen API with Python and Gemma 3B LLM, enhancing user engagement by allowing natural conversations with AI avatars
- Achieved 100% script-to-video conversion through a dual-model backend pipeline and frontend integration
- Increased video completion rate to 95% by optimizing backend stability and error handling mechanisms
- Enhanced user experience through real-time status updates using WebSocket polling for video rendering progress

### Machine Learning Researcher

Jan 2024 – May 2025

*University of Portland*

*Portland, OR*

- Optimized AI agent behavioral fitness scores by 30% using advanced algorithms in C#/.NET to replicate behavioral patterns of living organisms
- Identified 3 behavioral patterns, boosting stability across 4 newly built environments over 100+ generations
- Accelerated analysis workflows by 40% by creating a Python-based classification system with real-time analytics
- Designed a metrics framework elevating reward discovery by 12% while reducing computational overhead

### Computer Science Grader

Sept 2025 – Present

*University of Portland*

*Portland, OR*

- Maintained 100% on-time grading delivery by evaluating 25-30 weekly data structures assignments
- Improved programming skills for 25 students by providing targeted code review and debugging support

## PROJECTS

### DinnaSwipe | *React Native, TypeScript, Supabase PostgreSQL, Overpass API*

July 2025 – Sept 2025

- Engineered a group restaurant recommendation app using agile methodologies with React Native and TypeScript, serving 500+ restaurants
- Developed a location-based restaurant search across 8 cuisine types using Overpass API for seamless discovery
- Incorporated a voting process via PostgreSQL synchronization and database optimization for group decisions

### NBA Game Predictor | *Python, XGBoost, PyTorch, TensorFlow, React, Docker*

May 2025 – Aug 2025

- Built a machine learning prediction model using XGBoost and PyTorch achieving 79% accuracy and 0.84 AUC
- Deployed a full-stack application using Docker containers on Render and Vercel with an automated CI/CD pipeline
- Analyzed 1,000+ NBA games through a Python-based data pipeline using statistical analysis and model validation

### AI ChatBot | *Flask, JavaScript, LangChain, GitHub Actions, Jest*

Jan 2025 – May 2025

- Developed a medical training chatbot with 60+ clinical scenarios using Flask and JavaScript to help nursing students practice their diagnostic skills
- Enhanced contextual accuracy by 85% through retrieval augmented generation using LangChain for responses
- Deployed a production-ready REST API with 90% code coverage using GitHub Actions and Jest for CI/CD testing
